   From **July 2013** to **February 2015 – 1 Year 7 Months**

Roles & Responsibilities:
   - ❖ Design & Development of Client Websites with C-Panel.
   - ❖ Developed a complete module for maintaining a travel based company (Client company - ORANGETRIPS HOLIDAYS) by fully automating all the processes of the company like creating leads, assigning them to different employees, sending invoices, booking vouchers, resort booking, holiday packages customization and etc.
   - ❖ Designed & Developed an Online CRM Software (myleadmysale.com) for different type of companies to use the same operations mentioned above like leads creation & assigning, sending invoices, booking vouchers etc. This software is in live and many small companies are using it.

- ❖ **Generic Subscription Manager –** This is a platform where the content will be delivered to mobile users based on their pack subscription. There are multiple modules like Subscription, Unsubscription, Renewal, Content Delivery & etc and all these are managed by this platform. We have tie up with many operators from various countries and this platform will manage all the requests and load balancing. This is critical project since the revenue is very high and customer base is in several lakhs. So there are daily activities like Cross server communication validation, maintaining server load, processes and mysql query tuning for better performance.

- ❖ **M-Tutor.com –** This is a E-learning website where there are multiple universities and for each university there are multiple topics semester and department wise. Contents are in the video format and it will be streamed using our streaming server and AWS. Also there are other features like Assessment, Notes, Question Bank, Ask a Doubt. Also providing API services for its Android & iOS applications.

  - ➢ Framework: Customized MVC framework

  - ➢ Team Size: 2

  - ➢ Role: Created basic project structure, DB design, splitting as modules and coding respectively.

- ❖ **Time Entry System –** A tool to enter each employee's works for each half hour (configurable) and track the same by using multiple reports. Each employee will be having separate login. They can enter their daily tasks for each day. Entered tasks cannot be edited after one day. Their superiors can edit the same. There will be role based categories for all users. Category selection for each entry is mandatory. Based on their entry, reports will be generated as who worked more than 12 hours, less than 9 hours, less than 8 hours excluding lunch/permission and other reports also exist. Also daily emails will be sent to management as well as users about their last day's overall time spent etc.

  - ➢ Framework: Laravel

  - ➢ Team Size: 3

  - ➢ Role: Created basic project structure, DB design, splitting as modules and assigning to team. Completed Task Entry module, and few high level reports.

- ❖ **Tracking Tool –** Overall project maintaining system. There will be tasks which can be uploaded, assigned to Project Managers. Each task will be having 20 stages including QC. PM will assign each stage to different users with target. All stages will be having multiple stages. QC required stages will get QC defects counts for each stage/task. Rating can be entered for each stage/task. All the entries, changes will be saved with date and time. Based on the data, various reports are generated such as Employee/PM target, completed, pending along with their performance, quality, quantity etc. Monthly target, completed tracking and few more reports.

  - ➢ Framework: Customized MVC framework

  - ➢ Team size: 5

  - ➢ Role: Created basic project structure, DB design, splitting as modules and assigning to team. Generating few high level reports.

- ❖ **Ask a Doubt –** Question & Answer module. Student will post question from his login. Moderator will assign it to faculty based on subject. Before assigning, moderator can search similar questions and approve the same answer if found. Once moderator assigned, faculty will get notified. Then he answers the question. Once answer posted, moderator will verify and approve the answer. Once moderator approves, student can view the answer.

  - ➢ Framework: Custom MVC framework

  - ➢ Team size: 3

  - ➢ Role: Created basic project structure, DB design, splitting as modules and assigning to team. Developed around 80% of codes and modules for this project. Generating few high level reports.

- ❖ **Chat –** Chat module for students including find friends. Cometchat code configuration and changes implementation for friends module. Student can do chat with his friends. He can add friends by giving request to the required user from friend's module. Once request approved, they can chat

together. Chat module involving sending attachments, share screens, whiteboard, creating groups, Audio/video calls etc.
